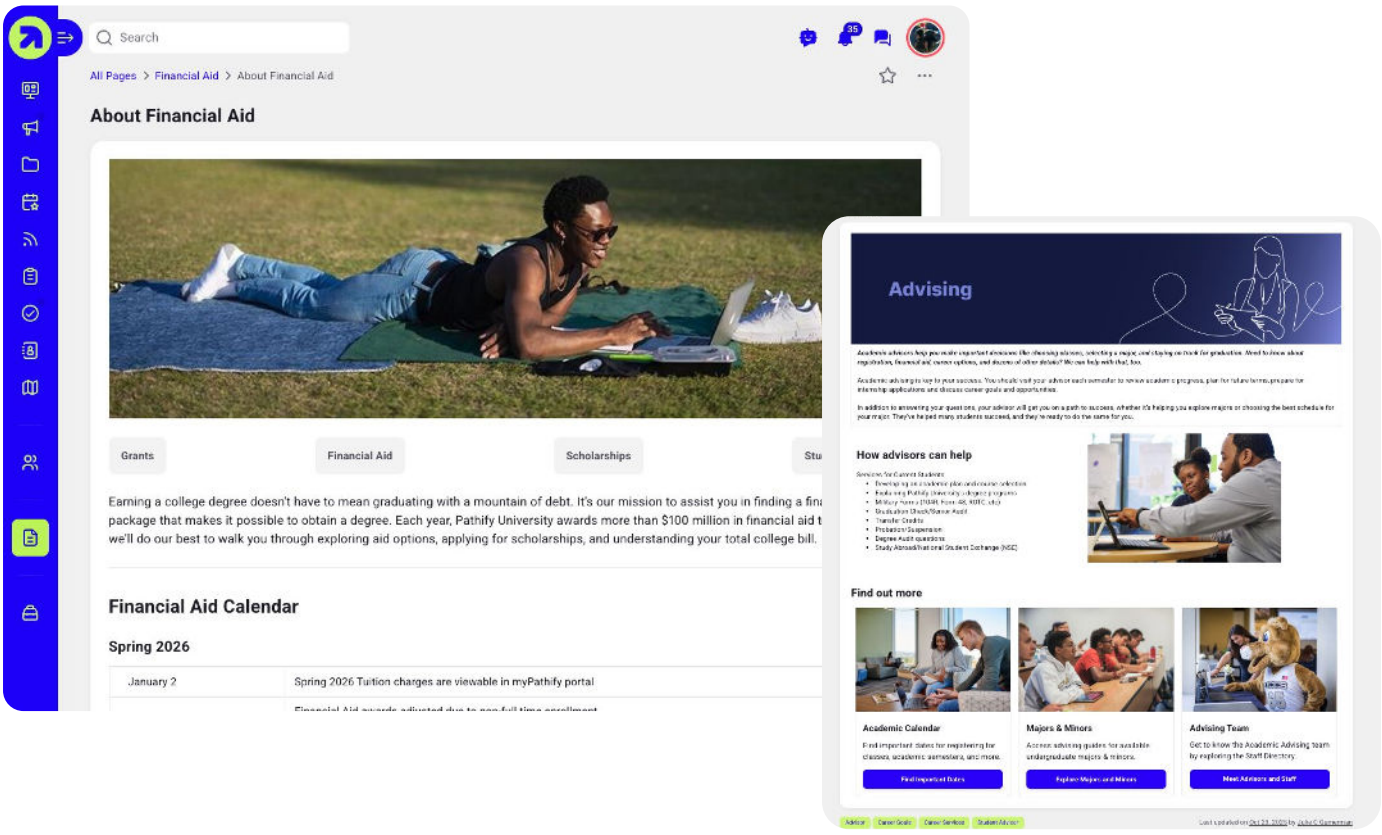
Pages

Clean up public-facing website content by moving internal content behind the authentication layer. Pages serve as the Engagement Hub's primary Content Management System, enabling institutions to delegate ownership to the right teams. With an intuitive WYSIWYG editor, office staff, department heads, student workers, and other admins easily create and manage content. Pages also supports iFraming existing web resources, making it simple to integrate and extend content across the Hub.



Resource Access
Provide personalized access to the most relevant webpages, resources and information — whether it's Financial Aid, Res Life or Advising.

Embedded Content Integration
Integrate existing web resources by iFraming them into Pages, enhancing accessibility and reach.

Granular Page Management
Set precise permissions defining how users view, add, edit, or approve pages with full control.

Self-Service Content Creation
Enable key stakeholders to create their own content using a dynamic, low-code WYSIWYG interface.
